

Sopranos Finale Pool

The final episode airs this Sunday, June 10. Don't just predict who will live and who will die... How many more plot details can you predict?

Sopranos Finale Pool

Rules

1. Choose any number of combinations of characters (along the left side) and fates (along the top), then initial each of your predictions in the corresponding cell.
2. Each prediction (each cell) will cost you _____ of play money.
3. Hand in your game sheet and play money by _____ to the game administrator, _____.
4. Winning cells will be identified by the game administrator during the final episode of the Sopranos on June 10, 2007 (ex: If Uncle Junior commits suicide, C-17 will be a winner. If Dr. Melfi has a hallucination, P-9 will be a winner). The game administrator makes the final decision regarding any plot ambiguity or dispute.
5. There will almost certainly be multiple winners, in which case the pot is divided proportionally among the winning players according to each player's number of correct predictions. (ex: If one player makes six correct predictions, a second makes three, and a third makes one, then the pot is divided 60/30/10% among the three winners.) The game administrator is responsible for all mathematical calculations!

FAQ

Q: Where's *<missing character>*?

A: Not every character is included. Whaddaya gonna do? Game administrators may, however, add additional names in the blank spaces provided along the right side of the grid (optionally, admins may also permit players to add their own characters).

Q: What about *<your personal plot prediction>*?

A: As above, the game administrator may add several additional plot events in the blank spaces provided along the top of the grid (and, as above, admins may extend this privilege to the players if they wish).

Q: But *<character>* is already dead!

A: In order to both (a) avoid spoilers for those players who may have missed a few episodes, and (b) permit flashbacks, dreams, and other alternate-reality developments to occur, a small selection of deceased characters have been scattered throughout the grid. (Predicting that a character will die who is already dead does not count as a correct prediction, smart-alec!)
